Scientific report for the Host Institution and STSM Coordinator

Prague, 26 April 2016

During my STSM I participated in the design sprint “Keywords and Text” organized by the Huygens ING in the Hague, 11-16 April 2016. Following previous design sprints organized by the WG 6 to make an user interface that facilitates the mapping from unstructured to structured data, IT specialists of the Huygens ING and of the (W)EMLO project developed here – in collaboration with historians of the Dutch Republic of Letters and other members of the Action’s WG3 specializing in topic-modelling – new methods of keywords indexing, suitable for early modern learned correspondence to be published online. Moreover, my agenda was to prepare the WG3-session for the Warsaw conference which will concentrate on new research questions regarding the Republic of Letters and early modern scholarly communication from the perspective of technological issues.

All further outcomes arising from my mission will be advised to the STSM coordinator.

According to the COST rules I would like to kindly ask you for “an official letter/ Email confirmation of acceptance“ which is a prerequisite for the reimbursement of the grant. Thank you for considering this Scientific report. Should you require further information, please do not hesitate to contact me.

Lucie Storchová
